TIP:
The economic miracle
of unit heaters

Ceiling-mounted TIP unit heaters heat the showrooms belonging to the Seyfarth car dealership in Gotha, Germany.

01 ▶ Product information

TIP – Temperature-controlled air. As much as you need.

With its TIP unit heater, Kampmann has a simple solution for the optimum centrally controlled heating and ventilation of buildings of all kinds, industrial and commercial workplaces, warehouses or greenhouses.

With a housing made of sendzimir galvanised sheet steel with threaded rods fitted as standard, TIP unit heaters are ideal for wall-mounting as well as ceiling-mounting. Their standard equipment also includes a single-row louvre and motor guard.

Operating principle

Air is drawn in through the whisper-quiet sickle-blade fan and is blown through the copper/aluminium heat exchanger into the room. Models with large heat exchanger capacity are ideal for use with low water temperatures.

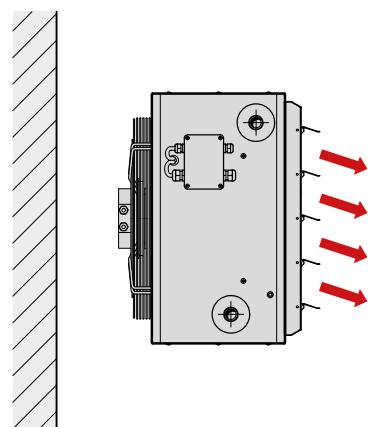

Air guidance

TIP unit heaters are supplied as standard with a single-row louvre. The air can optionally be discharged through a double-row louvre or air diffuser, both available as an accessories.

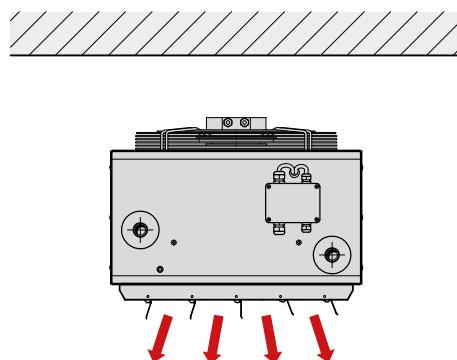

Available ex-stock

Four different models are available ex-stock.

Example of wall-mounted heating unit

Example of ceiling-mounted heating unit

Product data

Product benefits

- ▶ Unbeatable in terms of value for money
- ▶ Sickle-blade, whisper-quiet fan with optimised full nozzle
- ▶ Neutral in colour, hard-wearing and tough
- ▶ Fully regulable and centrally controllable
- ▶ Copper/aluminium heat exchanger, suitable for use with low water temperature systems
- ▶ Single-row ceiling or wall louvre and motor guard as standard

Features

- ▶ Continuously variable single-phase EC motor
- ▶ Copper/aluminium heat exchanger
- ▶ Four sizes
- ▶ Different air outlets are available

Installation

- ▶ Wall- or ceiling-mounted

Air stream

- ▶ Recirculating air

Heating

- ▶ LPHW

Cooling

- ▶ ---

Hybrid Eco

Performance data

Heat output [kW]¹⁾	› 4.4 – 71.4
Air flow [m³/h]	› 260 – 9680
Sound pressure level [dB(A)]²⁾	› < 20 – 65
Sound power level [dB(A)]	› 31 – 81

¹⁾ at LPHW 75/65 °C, t_{L1} = 20 °C

²⁾ The sound pressure levels were calculated with an assumed room insulation of 16 dB(A). This corresponds to a distance of 5 m, a room volume of 3000 m³ and a reverberation time of 2.0 s (in accordance with VDI 2081).

Operating limits

- ▶ Max. operating pressure: 16 bar
- ▶ Max. entering water temperature: 120 °C
- ▶ Min. entering water temperature: 35 °C
- ▶ Inlet air temperature: 40 °C
- ▶ Max. glycol volume: 50 %

Applications

Buildings of all kinds, which are to be ideally heated and ventilated with centralised or decentralised control.

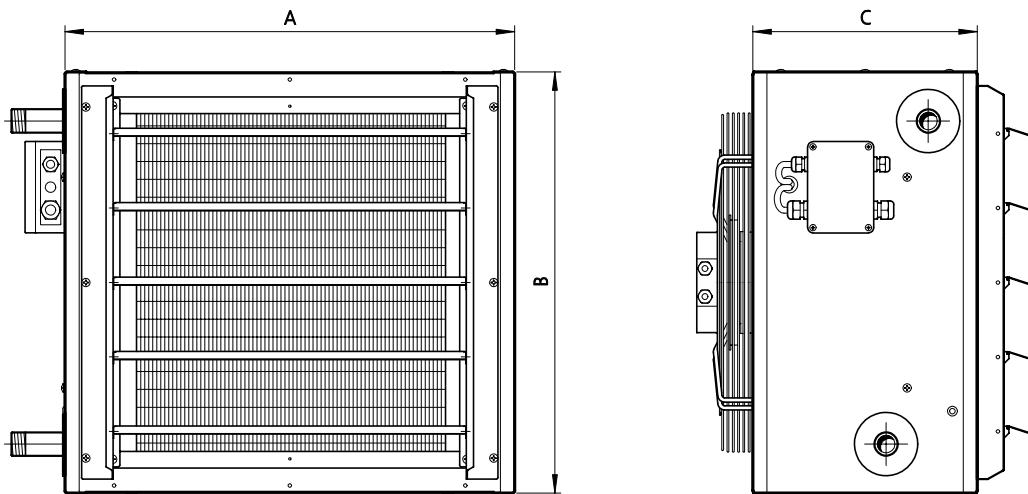

Selection guide

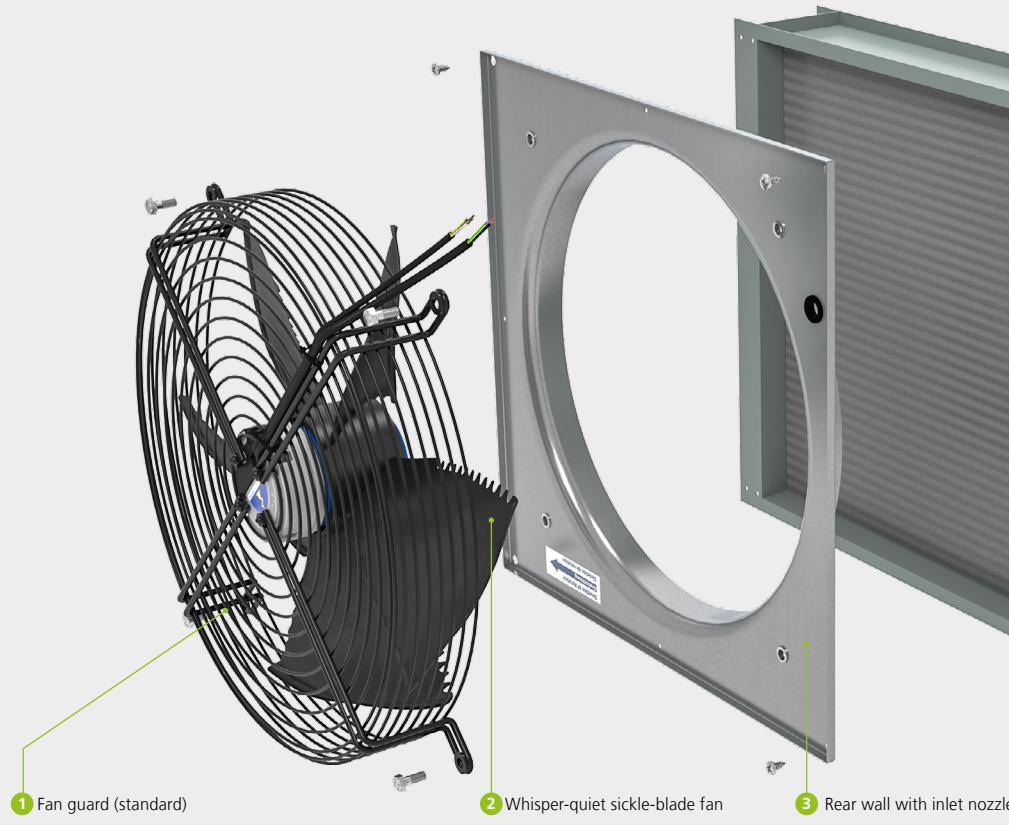

Fan version	Model size	Width (A) [mm]	Dimensions		Heat exchanger model copper/aluminium	
			Height (B) [mm]	Depth (C) [mm]	Heat output ¹⁾ [kW]	Air flow [m ³ /h]
EC fan, 230 V, high speed	4	540	500	320	6.4 – 18.4	520 – 2720
	5	640	600		4.4 – 37.5	260 – 4860
	6	740	700		6.9 – 48.7	430 – 6900
	7	840	800	360	14.2 – 71.4	970 – 9680
EC fan, 230 V, reduced speed	4	540	500	320	5.8 – 15.3	450 – 2210
	5	640	600		6.5 – 26.0	480 – 3370
	7	840	800	360	10.7 – 55.6	590 – 7820

¹⁾ at LPHW 75/65 °C, t_{L1} = 20 °C

Technical drawing (Dimensions in mm)

TIP at a glance

Features

1 Fan guard (standard):

- ▶ screw-fixed as standard with whisper-quiet sickle-blade fan

2 Whisper-quiet, sickle-blade fan, ErP 2015-compliant:

- ▶ continuously variable EC single-phase whisper-quiet sickle-blade fan
- ▶ excellent efficiency due to the aerodynamic design of the rotor housing
- ▶ electrical thermal class F model
- ▶ motor protection: IP 54
- ▶ balanced at two levels; balancing quality according to G6, 3 DIN ISO 1940 Part 1

- ▶ fan characteristic line coordinated to the unit housing enables the speed to be controlled by voltage reduction

- ▶ external rotor motor integrated in the fan impeller
- ▶ complies with Directive (EU) 327/2011 ("LOT 11")

3 Rear wall with inlet nozzle:

- ▶ inlet nozzle optimised to the flow characteristics of the fan

4 Heat exchanger:

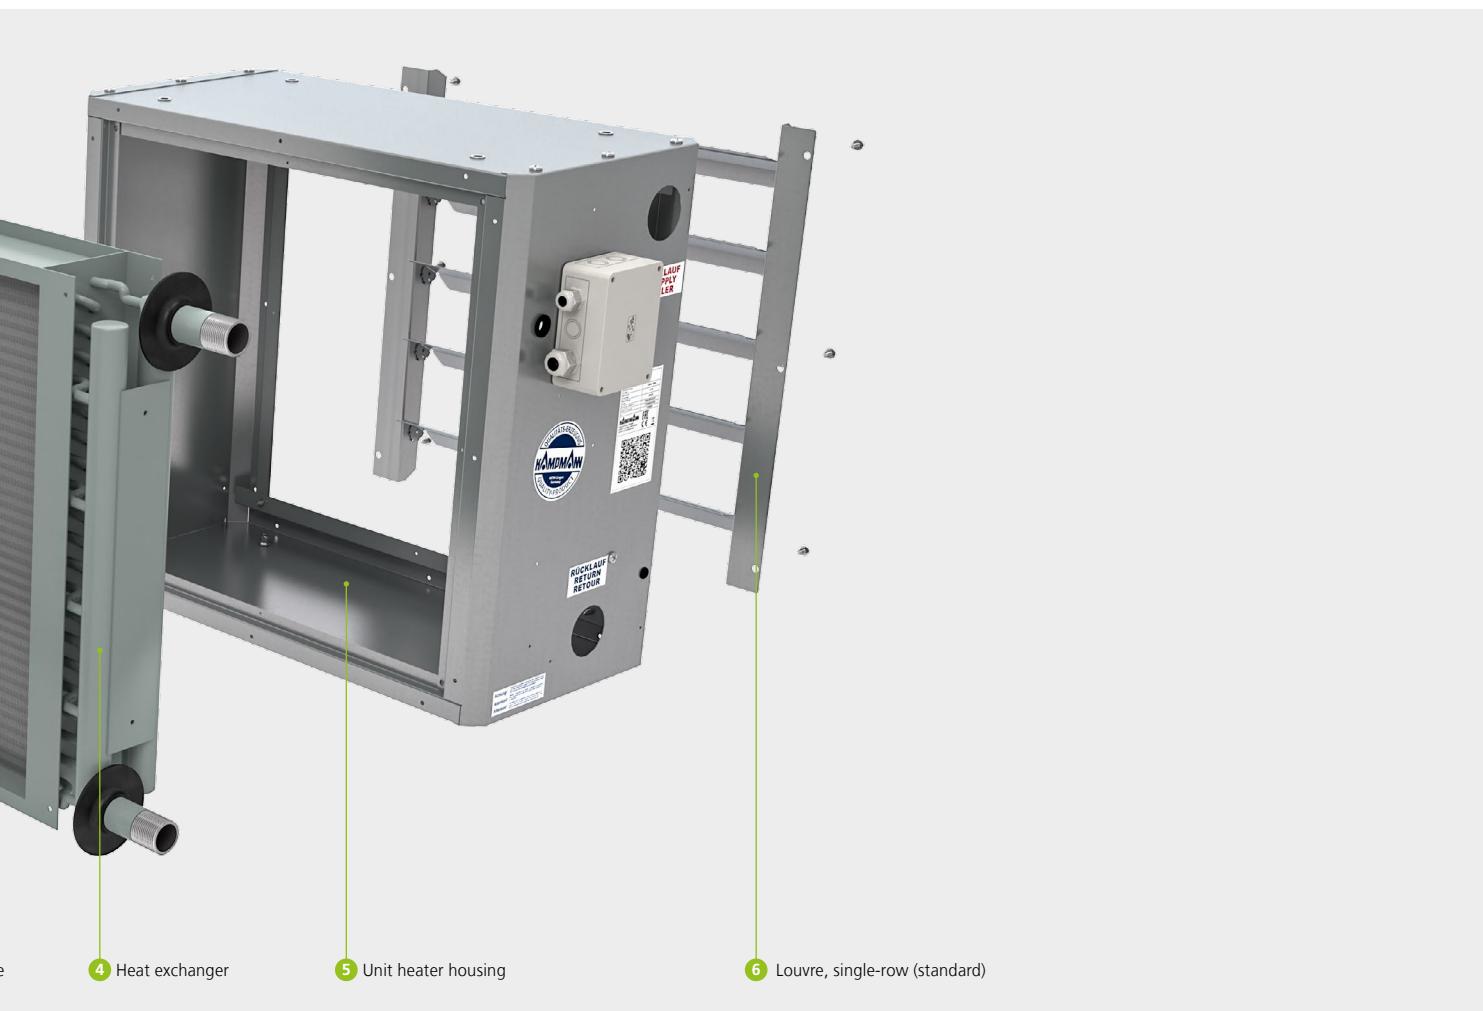

- ▶ copper/aluminium heat exchanger, especially lightweight, with high heat outputs from minimal dimensions
- ▶ suitable for low temperature heating systems and LPHW heating systems
- ▶ steel distributor and collector
- ▶ not suitable for steam and thermal oil
- ▶ hollow copper tubes with aluminium fins, connected by expanded pipes, perfect for lasting heat transfer
- ▶ cannot be used in areas with high levels of dust or oil in which extensive cleaning is needed

5 Unit heater housing:

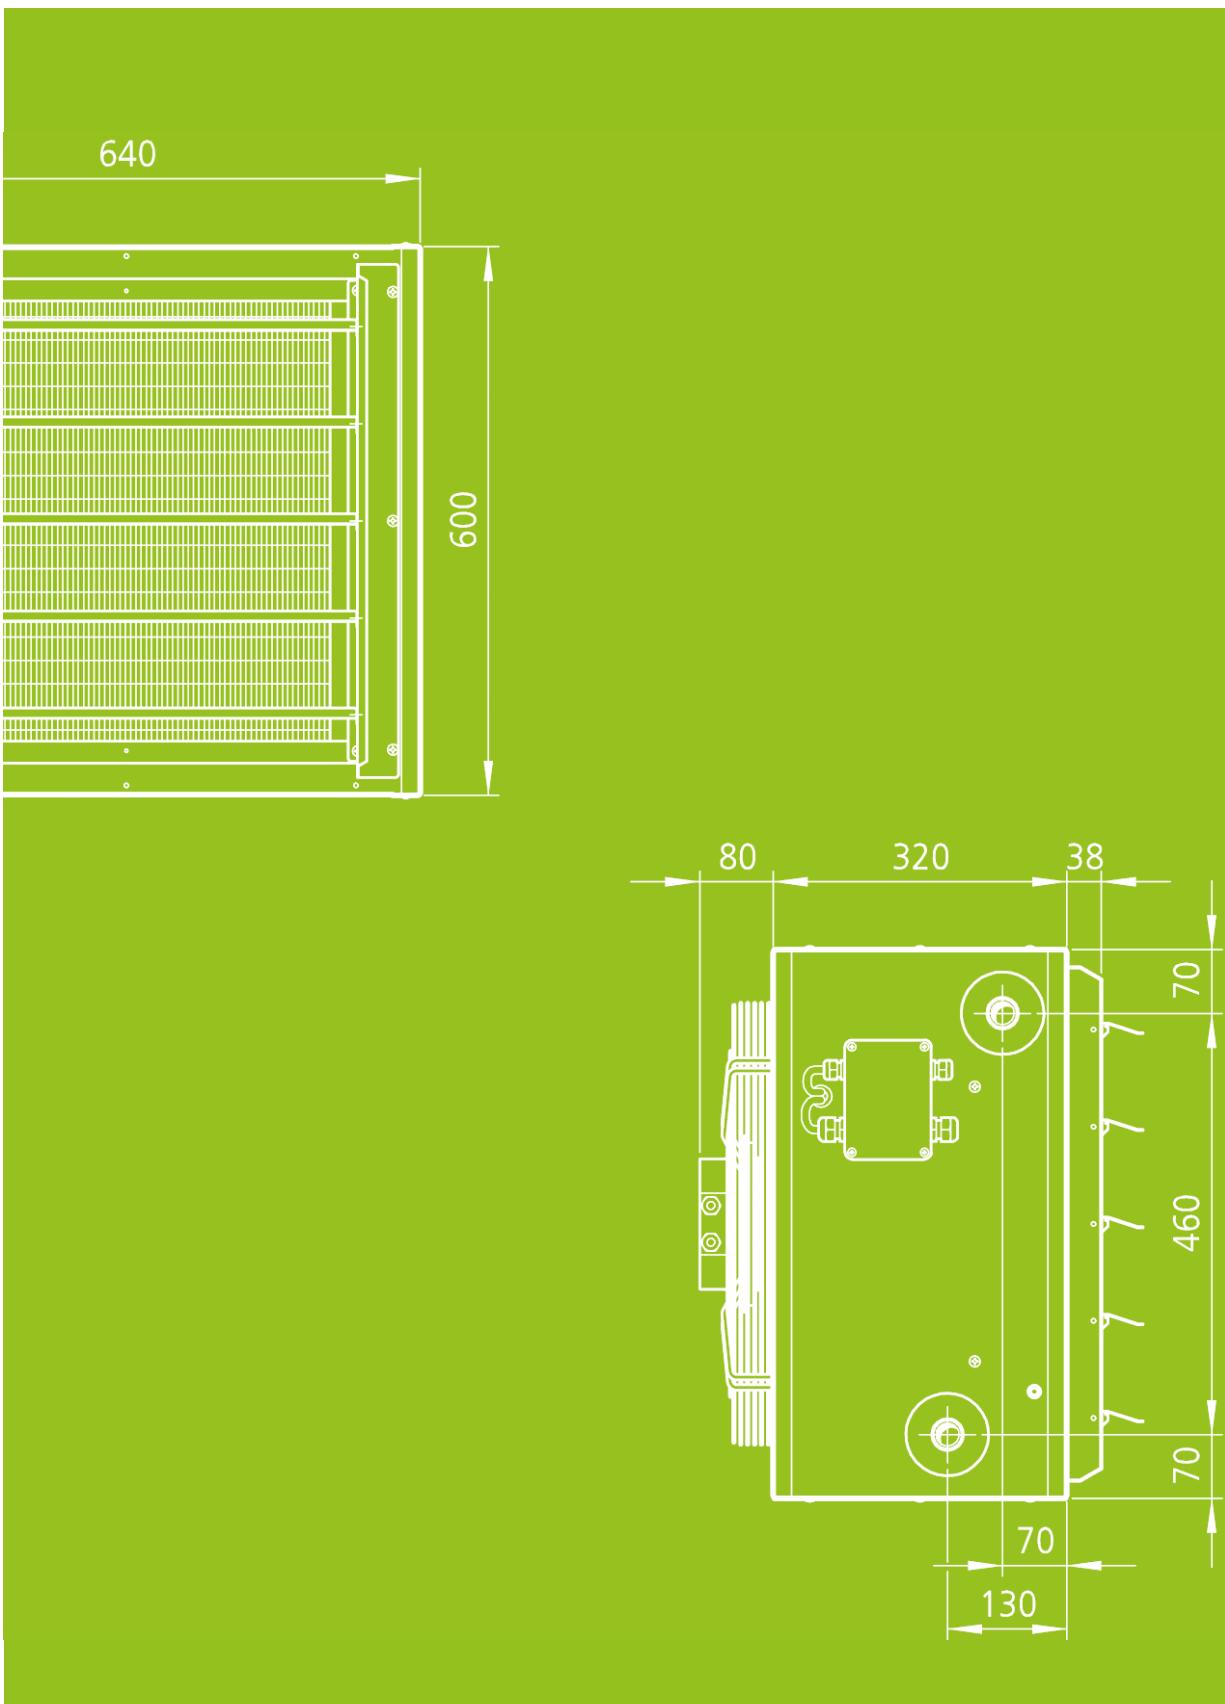

- ▶ self-supporting, made of galvanised sheet steel
- ▶ standard fixing holes for wall or ceiling-mounting
- ▶ resistant to damage
- ▶ shallow depth, ideal for the simple attachment of outlet-side accessories

6 Single-row air louvre (standard):

- ▶ for wall- or ceiling-mounting
- ▶ achieves excellent throw

02 ▶ Technical data

General

EU Directive 2009/125/EU

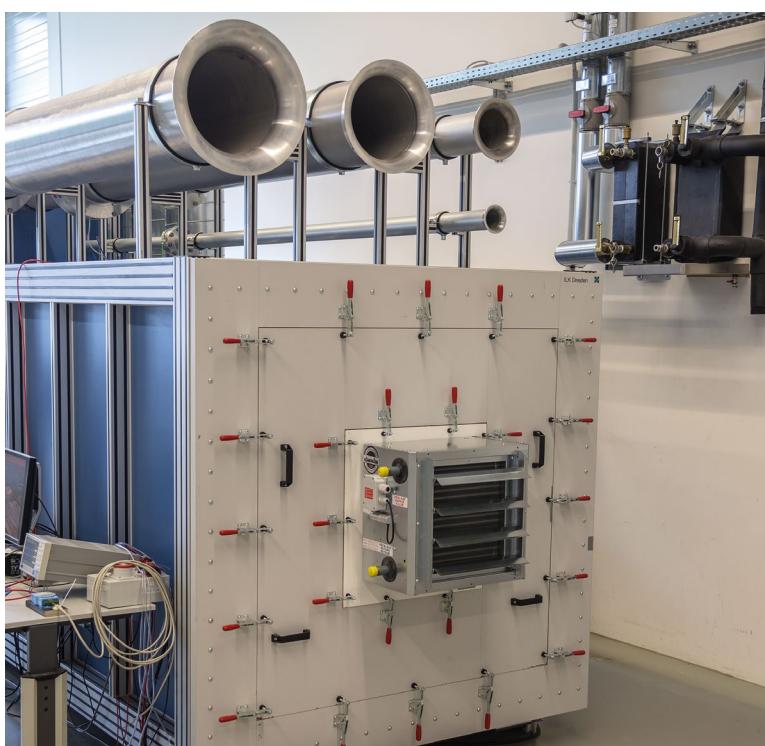

Compliance with the ErP Directive 2015

The European Commission's ErP Directive ("Energy-related Products") evaluates and modifies the requirements of technical products in energy-related applications. According to the Directive (EU) 327/2011 ("LOT 11"), the efficiency requirements have become more stringent for fans with an electric drive output of 125 watts to 500 kilowatts. A number of fans can no longer be marketed since the second stage entered into force on 1st January 2015.

The inlet nozzle used in the unit must be taken into account along with the fan, in terms of energy.

The TIP range of unit heaters is solely fitted with ErP-compliant fans. The conformity of the TIP range has been laboratory-tested and proved. The measurements can be provided on request.

The TIP unit heater range and components used are produced and tested in line with the applicable state of the art. The requirements of the applicable norms, e.g. Machinery Directive, EN60335 (Safety of Electrical Equipment) and EMC are all met.

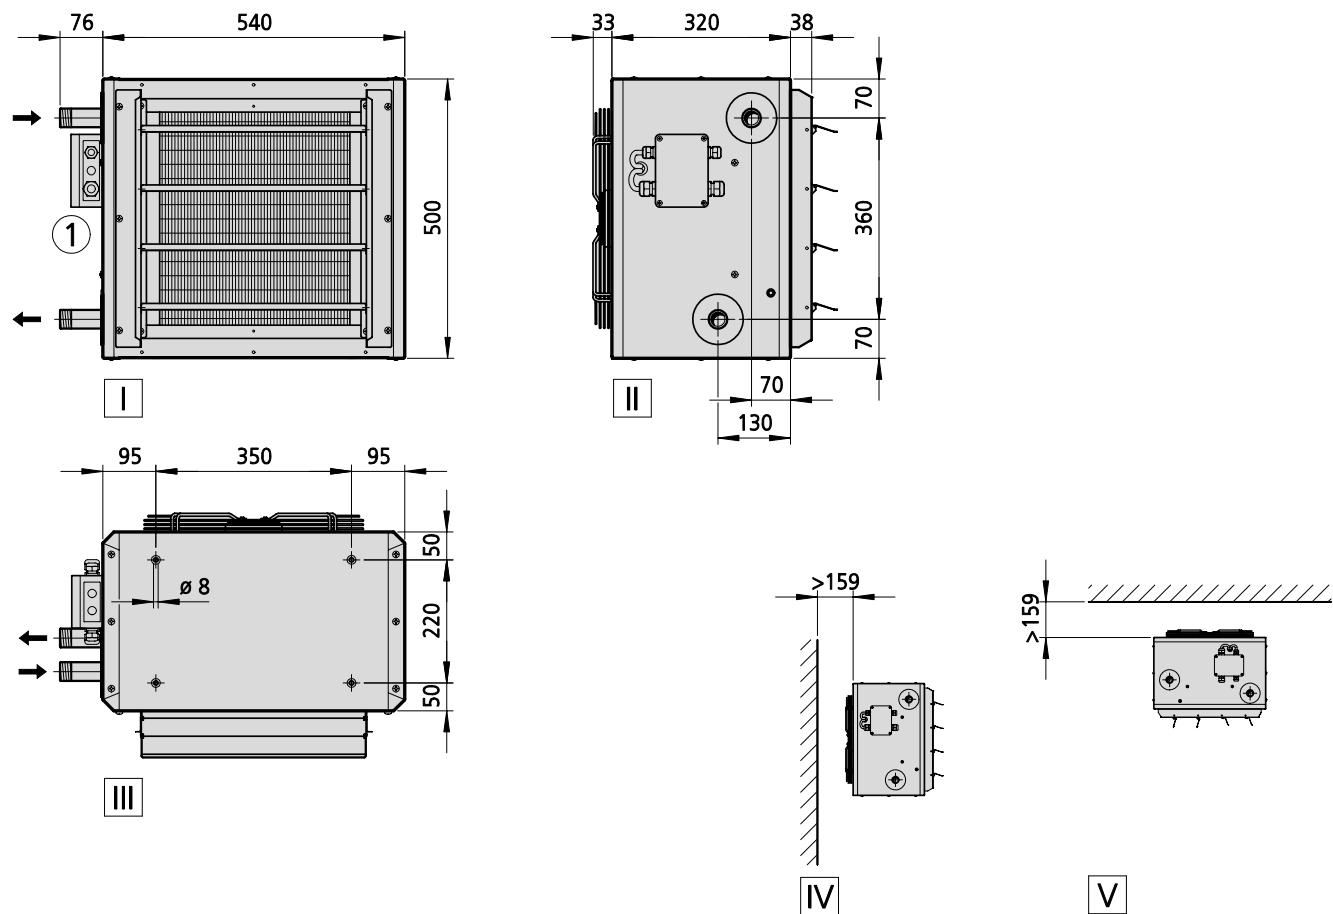

Test chamber for air performance measurements according to DIN EN ISO 5801,
Kampmann R&D Centre

03 ▶ Design information

Information on planning and design

The selection and configuration of TIP unit heaters depends on more than just the heat load calculated. The required air circulation, structural and acoustic conditions and unit-specific properties need to be taken into consideration, among other things.

Water resistance

Please use our online calculation programs to determine the water resistance:

- ▶ Kammann.de/tip

The water resistance is formed from:

- ▶ the heat output Q_{eff}
- ▶ the heating medium temperature difference

$$\Delta t_w = t_{w1} - t_{w2}$$
- ▶ the heating medium volumetric flow

$$m = \frac{Q_{\text{eff}}}{\Delta t_w} \times 0.86$$

Noise

There is minimal noise from these units due to the aerodynamic design of the whisper-quiet sickle-blade fan. Flow noise is reduced because of the sickle-shaped design of the profiled blades combined with the optimised inlet nozzle.

The uniform spread over the entire frequency range, minimising blade passing noise, reduces unpleasant peaks of noise. Nonetheless, take into account the permissible noise levels when designing unit heaters.

Sound pressure level

The A-rated sound pressure levels given in the technical data (pages 14 to 27) have been calculated with an assumed room insulation of 16 dB(A). This corresponds to a clearance of 5 m, a room volume of 3000 m³ and a reverberation time of 2.0 s (in accordance with VDI 2081). The actual sound pressure level may differ significantly from the stated figures, depending on the room geometry, absorption capacity of the space, equipment, accessories etc.

Sound power level

The sound power level describes the noise emission from the units, independently of the space and distance. The sound pressure levels can be calculated when the room geometry and absorption values are known. The sound power levels have been determined using the enveloping surface process according to DIN 45635-56.

04 ▶ Control

Control of TIP – electromechanical model

Product features

The EC fans used can be continuously variably controlled by a 0-10 V DC signal. The “intelligent” motor electronics detects any possible motor fault and automatically switches off the fan. This fault can be externally evaluated. The entire group or individual units are shut down in the event of a motor fault, depending on the control version. The speed can be limited to approx. 50 % of the maximum speed by the potentiometer in the junction box. Actuation by Modbus-RTU instead of by a 0-10 V DC signal is possible depending on the type of unit heater.

Control units

Four different control units are available for operation and control.

Speed controller, type 30510

Continuously variable speed controller for use in conjunction with a thermostat for room temperature-dependent two-point control of heating or cooling units in closed rooms. The fan speed is set manually on the speed controller at between 0-100 %. The thermostats activate the ventilation units at the pre-set speed depending on the temperature. It is possible to automatically switch between day and night mode using timer program solutions (type 30056; type 30076).

Room thermostat, type 30155

The EC recirculating air control unit type 30155 enables the operation and temperature control of heating/cooling recirculating air units in 2- or 4-pipe mode. The room temperature can be set using a rotary dial. The temperature is controlled by a fan and valve. In principle, the ventilation unit is switched on and off depending on the temperature and, at the same time, the valve is opened/closed. The fan can be operated manually at 3 stages or continuously variably in automatic mode. The control unit is also equipped with a frost protection function.

Clock thermostat, type 30256

The EC recirculating air control unit type 30256 enables the operation and temperature control of heating/cooling recirculating air units in 2- or 4-pipe mode. The room temperature can be set using the functional keys. The temperature is controlled by a fan and valve. In principle, the ventilation unit is switched on and off depending on the temperature and, at the same time, the valve is opened/closed. The fan can be controlled at 10 stages, both in automatic mode as well as in manual mode. The control is also equipped with an automatic summer/winter changeover and a frost protection function. The built-in timer program also enables day or week programs to be set.

Electronic speed controller, type 30515

The continuously variable electronic compact controller is designed for the operation of up to 10 recirculating air units (2-pipe heating/cooling) with EC fans to heat or cool rooms. The controller has a temperature control, which works with a fan and shut-off valve. The temperature setpoint can be set for day and night mode. A digital timer, including day, night and week program, is also included. The room sensor supplied is installed separately. A mean value can optionally be formed using 2 or 4 room sensors. Apart from continuously variable speed control, the fan speed can also be manually set. In addition, the control has a frost protection function, an external enable switch and a potential-free operating and collective fault alert, among other things. If required, the fan can also be used for pure air circulation without heating or cooling.

Cabling

The following points need to be taken into account with the cabling and wiring diagrams below:

- ▶ Comply with the details on the type of cable and cabling, taking into consideration VDE 0100.
- ▶ Without *: NYM-J. The requisite number of wires, including protective conductor, is stated on the cable. Cross-sections are not stated, as the cable length is involved in the calculation of the cross-section.
- ▶ With *: J-Y(ST)Y 0.8 mm, max. 100 m between the speed controller and the last unit heater; provide a shield on one side when longer than 20 m. Lay separately from power lines.
- ▶ With **: Sensor line 1.5 mm², e.g. J-Y(ST)Y, 4 x 2 x 0.8 mm, max. 100 m, lay separately from power lines.
- ▶ With ***: J-Y(ST)Y, 0.8 mm, max. 50 m, lay separately from power lines.

- ▶ With ****: J-Y(ST)Y, 0.8 mm, max. 100 m. Lay separately from power lines.
- ▶ If other types of cables are used, they must be at least equivalent.
- ▶ The terminals on the unit are suitable for a maximum wire cross-section of 2.5 mm², the mains plug for max. 4.0 mm².
- ▶ Any RCCBs used must be pulsating current-sensitive (type A). When the power supply to the unit is switched on, pulsating charging currents from the capacitors in the integral EMC filter can cause residual current protection devices to trip. We recommend the use of RCCBs with a tripping threshold of 300 mA.
- ▶ The electrical data listed in the following table needs to be considered when configuring the mains supply and fuses on site.
